Cell 1:183-192(1998).

-I- FUNCTION: Acts as a RAC1 guanine nucleotide exchange factor (GEF) and can induce membrane ruffling.

-I- SUBUNIT: Interacts with PAK kinases through the SH3 domain.

-I- SIMILARITY: CONTAINS I DBL-HOMOLOGY (DH) DOWAIN.

-I- SIMILARITY: CONTAINS I PH DOMAIN.

-I- SIMILARITY: CONTAINS I SH3 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Onset of transcription of the aminopeptidase N (leukemia antigen CD 13) gene at the crypt/villus transition zone during rabbit enterocyte differentiation."; PEBS Lett. 259:107-112(1989).

C -! - CATALYTIC ACTIVITY: Release of an N-terminal amino acid, preferably a neutral or hydrophobic one, from a polypeptide.

A Minoacyl-arylandses are poor substrates.

C -! - COPGATOR: BINDS 1 ZINC ION.

-! - SUBCELLULAR LOCATION: Type II membrane protein.

-! - STM: SULFATED (BY SIMILARITY).

-! - SIMILARITY: BELONGS TO PEPTIDASE FAMILY MI.

Submitted (JAN-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: POSSIBLY INVOLVED IN CLAVULANIC ACID BIOSYNTHESIS.
-!- CATALYTIC ACTIVITY: Agmatine + H(2)O = putrescine + urea.
-!- COFACTOR: MANGANESE (POTENTIAL).
-!- SIMILARITY: BELONGS TO THE ARGINASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Primary structure of the herpesvirus saimiri genome.";
J. Virol. 66:5047-5058(1992).
-!- FUNCTION: VP22A IS A COMPONENT OF THE CAPSID CORE INVOLVED IN PROCESSING AND PACKAGING OF PROGENY DNA. VP24 IS A PROTEASE WHICH CAN PROTEOLYTICALLY CLEAVE ITSELF AND VP22A AT THE CTERMINUS (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: Cleaves -Ala-|-Ser- and -Ala-|-Ala-bonds in the scaffold protein.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S21.
-!- SIMILARITY: TO OTHER HERPESVIRUSES CAPSID PROTEIN VP40.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                         July 18, 2003, 15:02:40 ; Search time 23.22 Seconds (without alignments) 79.863 Million cell updates/sec
